Introduction

Acquisition & Warranty

On delivery of your new Duncan Renovator AS3000/3500 please check that the machine is not damaged. In cases of shipping damage, please ask your dealer to arrange for the appropriate claim to be lodged immediately. Assemble any parts supplied loose and inspect your machine with the aid of this manual to familiarise yourself with its features. If you have any queries ask your dealer straight away. The machine is covered by our 12 month warranty on faulty parts, subject to normal use.

Record below the serial number of your machine and keep it in a secure place to help trace the machine and assist us when you order parts.

The Owner's Manual

Your new Duncan Renovator AS3000/3500 will give long and efficient service if given normal care and operated properly.

This owner's manual is provided so that you can become thoroughly familiar with the design of the machine and to furnish information on correct operation, adjustment and maintenance. Only persons well acquainted with these guidelines should be allowed to use the equipment.

A separate illustrated parts section has been provided so that if any parts are required your dealer will be able to supply them by reference to part numbers.

The manual is considered as part of your machine and must remain with the machine when it is sold.

Right and left hand references in this manual are determined by standing behind the machine and facing in the direction of travel.

This Document contains the Original Operating Instructions for this machine and are verified by the Manufacturer.

Signed:

Product Development Manager

Disclaimer

Every effort has been made to ensure that the information in this manual was accurate and up to date at the time of going to press. Giltrap AG reserves the right to make subsequent changes to the machine, where necessary, without notification.

The Company will not be responsible for any damage or consequential loss arising out of misinterpretation or failure to follow recommended procedures. Nor will it be liable for any damage caused by or arising out of modification or misuse of its product.

The owner has a responsibility to protect himself and others by observing all safety information and by ensuring all operators are well acquainted with the safety information, trained in the correct use of the machine and applying safe work practices.

Description of MachineThe Duncan 'Renovator AS3000/3500' is a Coil Tine T-

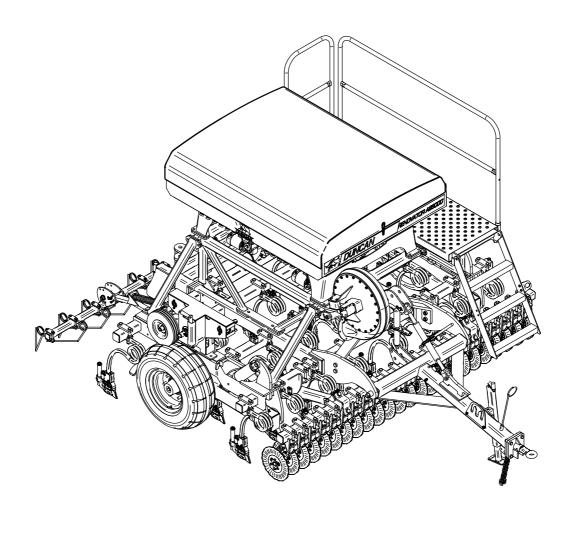

boot drill.

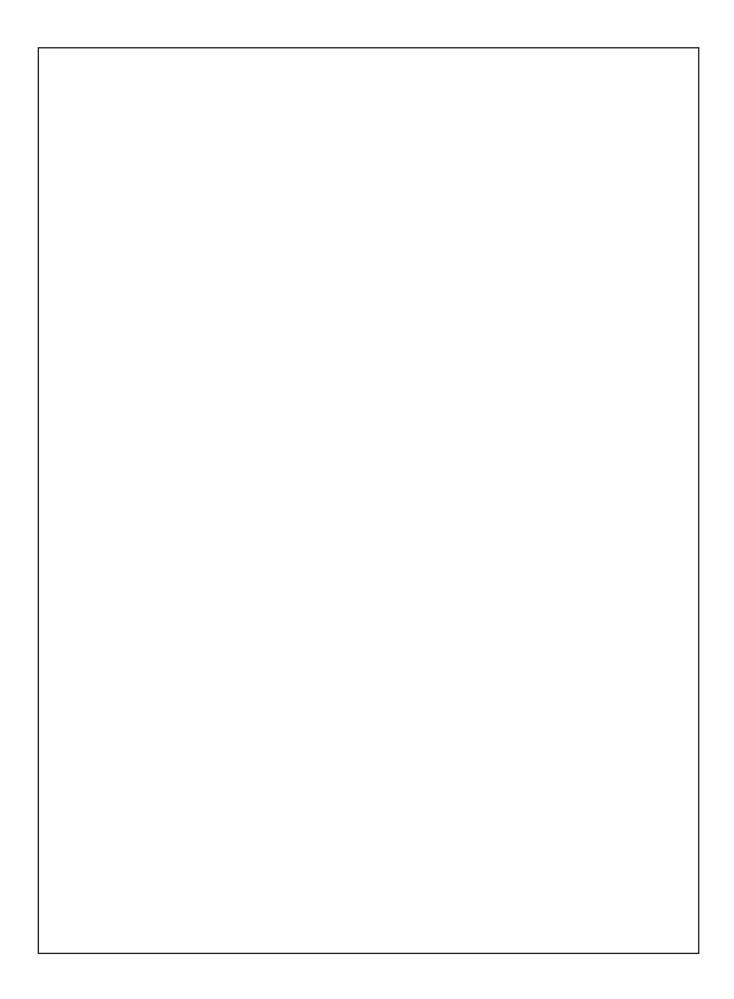

The large split hopper is mounted on a robust frame accommodating large diameter tyres.

Sowing depth is controlled by adjusting the hydraulic ram as required. The quality European air metering units handle all seeds from turnip and rape through to peas and maize and permits easy calibration. The seeders are driven via a jockey wheel with individually selected high or low ranges. For transport, the drive is easily disconnected by raising the drill to its transport height.

Working Principle

The air flow and metering units are set to give the desired sowing and/or fertilizer rate. The coil tine and Tboot, create the seed bed. Seed flows down the flexible tubes between seeder and tee-boot units, and drops into the prepared seed bed. Optional tine harrows and following roller enhance seed to soil contact.

! ATTENTION

On the machine important safety information is indicated by these symbols. These highlight general safety aspects in regard to the machine rather than specific hazards.

Do not ride or allow passengers on the machine.

Under no circumstances are passengers to be permitted on the machine while it is in operation or being transported. Any footboards and/or footsteps are provided solely for the purpose of preparing the machine for use.

Pinch Points Moving Parts

Keep clothing and body extremities well clear of pinch points while the machine is operating (seeding or calibrating). Keep well clear of moving parts at all times.

These signs typically occur wherever trapping points exist. These include drive chains, sprockets, shafts, wheels, discs, pivot points, etc. Guards are provided with the machine for safety reasons (where practical without compromising machine performance). Ensure these are always fitted during operation.

Sharp Points

Always exercise extreme caution in the vicinity of sharp edges and points.

Where possible guards are provided with the machine for safety reasons (where practical without compromising machine performance). Ensure these are always fitted during operation.

Footboards, footsteps, drawbars and other machine surfaces may be slippery when wet.

Apply extra caution in wet conditions and in the early morning when surfaces are wet.

Keep Clear. (It is dangerous to be in this area when the machine is operating.)

SAFETY - General

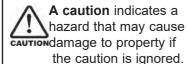

N.B. Throughout this manual important safety information is indicated by these symbols in the margin:

A prohibition should be observed under all circumstances.

A warning indicates a hazard that could cause warning is ignored.

This section of the manual offers general guidelines for the safe operation of machinery. It does not replace local safety regulations. These guidelines were current at the time of publication, but may be superseded by later regulations.

Giltrap AG has made every effort to highlight all risks to personnel or property. Owners and operators have a responsibility to exercise care and safe work practices at all times in the vicinity of the machine.

Owners are advised to keep up to date on safety issues and to communicate these to all users of the machine.

Contact the Occupational Safety and Health Service (OSH) for further information about general safety aspects. If you have safety concerns specifically related to this machine, contact your dealer immediately.

Operator Safety

Read this manual carefully before operating new equipment. Learn how to use this machine safely. Be thoroughly familiar with the controls and the proper use of the equipment before using it.

Take careful note of all safety instructions both in this manual and on the machine itself. Failure to comply with instructions could result in personal injury and/or damage to the machine.

Replace missing or damaged safety signs on the machine and ensure that these remain clearly visible.

It is the owner's responsibility to ensure that anyone who operates, adjusts, lubricates, maintains, cleans or uses the machine in any way has had suitable instruction and is familiar with the information in this manual (particularly with regard to safety aspects).

Operators and other users of the machine should be aware of potential hazards and operating limitations.

Be Prepared for Emergencies

Keep a first aid kit and fire extinguisher handy.

Keep emergency numbers for doctors, ambulance, hospital and fire department near your telephone.

SAFETY - General (Continued)

Appropriate Dress

Wear close fitting clothing and avoid rings or other forms of jewellery which could become caught in the machinery.

People with long hair must have it securely fixed and confined close to the head.

Refer to local safety standards for protective clothing and recommended safety equipment.

Adequate protection, such as a face mask, should be worn if operating this machine in dry and dusty conditions.

Transport This Machine Safely

Ensure that all linkage pins and security clips are fitted correctly. With trailing machines tow with the drawbar only, as this is the only safe towing point on the machine.

Always check that bystanders (especially children) are well clear (front and rear) before starting and moving the tractor and the machine.

Plan safe routes of travel, and be aware of power lines and other roadside hazards. Take particular care when towing implements on hillsides.

Do not ride or allow passengers on the machine.

This machine is not designed to carry passengers, and no riders are permitted.

Road transport

On public roads,

- · A speed of 40km/h must not be exceeded.
- Do not operate during the hours of darkness unless standard lights are fitted and clearly visible. (This also applies when visibility is limited, e.g., in foggy conditions.)

See the guidelines in the *Vehicle Dimensions and Mass Rule*, issued by the Land & Transport Safety Authority.

Avoid tip-overs

Avoid holes, ditches and obstructions which may cause the machine to tip over, especially on hillsides. Never drive near the edge of a gully or steep embankment - it might cave in. Slow down for hillsides, rough ground and sharp turns.

SAFETY - General (Continued)

Handle Agricultural Chemicals Safely

All farm chemicals should be stored, used, handled and disposed of safely and in accordance with the supplier's/manufacturer's recommendations.

Read the product label before using, noting any warnings or special cautions, including any protective clothing or equipment that may be required, ie. respirator.

Do not eat or smoke while handling sprays, fertilisers, coated seeds, etc. Afterwards, always wash your hands and face before you eat, drink, smoke, or use the toilet.

Store sprays, fertilisers, coated seeds, etc. out of reach of children and pets, and away from food and animal feeds.

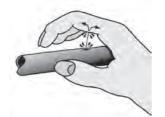

Any symptoms of illness during or after using chemicals should be treated according to the supplier's/manufacturer's recommendations. If severe, **call a physician or get the patient to hospital immediately**. Keep the container and/or label for reference.

Avoid any contact with fluids leaking under pressure, because the fluids can penetrate the skin surface.

Any fluid which penetrates the skin, will need to be **removed immediately by a medical expert.** Seek specialist advice on this type of injury.

Relieve the pressure before disconnecting any hydraulic or other lines. Make all repairs and tighten all fittings before re-connection to pressurised fluid.

Keep your hands and body away from any pinholes or high pressure jets. Search for leaks with a piece of cardboard instead of using your hand directly.

Safe Work Practices

All farm machinery is potentially dangerous and should be treated with caution and respect.

Before starting the machine, ensure that all controls are placed in neutral and that bystanders are well clear. Check that the guards have been securely fitted and that any adjustments have been made correctly.

Where possible, disconnect or isolate the drive mechanism to the implement. Lower the machine onto the ground when not in use

Do not operate this equipment when severe weather conditions appear imminent.

SAFETY - General (Continued)

Practice Safe Maintenance

Keep the machine in safe working condition. Routine maintenance and regular servicing will help reduce risks and prolong the life of the machine.

General Maintenance

Accidents occur most frequently during servicing and repair. The following general rules must be followed when maintaining or working with machinery:

- All operating and maintenance manuals must be read before and referred to while using or servicing any piece of equipment.
- Turn off all machinery power sources and isolate the machine before making adjustments, doing lubrication, repairs or any other maintenance on the machine.
- Ensure that the machine hydraulics are disconnected from the power source.
- Wear gloves when handling components with cutting edges, such as any ground cutting components.
- Beware of the following hazards when dismantling or maintaining the machine:-
 - > Hydraulics under pressure
 - > Springs under tension or compression
- It is recommended that you clean the machine with a water blaster or similar apparatus before commencing maintenance.

When machinery is fitted with hydraulics, do not rely on the hydraulics to support the machine. During maintenance or while making adjustments under the machine, always lock the hydraulics and support the machine securely. Place blocks or other stable supports under elevated parts before working on these.

Disco

Disconnect the electrical supply from the tractor before doing any electrical maintenance.

שסודע Welding

With electronic equipment in modern tractors it is advisable to disconnect the machine from the tractor, or at least disconnect the alternator and battery before attempting any welding.

Use Only Genuine Spare Parts

Unauthorised modifications or non-genuine spare parts may be hazardous and impair the safe operation and working life of the machine.

Excess lubricants must be disposed of safely so as not to become a hazard.

SAFETY - Machine Specific

This section of the manual gives specific guidelines for the safe operation of the Renovator AS3000/3500.

These guidelines were current at the time of publication, but may be superseded by later circumstances. They do not necessarily cover every possible hazard and must be read in conjunction with the **SAFETY - General** section (Page 7 to 10).

Hazard Points on the Renovator AS3000/3500

The lists below are not all-inclusive and serve only to highlight the more obvious areas of risk.

The decals attached to the machine are a general reminder that there are hazardous areas on the machine, rather than specifically highlighting all possible hazards.

For decal locations on machine, refer Page 13.

No Ride

Passengers are not permitted anywhere on the machine.

Pinch Points/Moving Parts

Hazardous areas include:

- · Drive chains.
- Sprockets between the jockey wheel, the transfer shaft and the output shaft.
- Universal joints and drive shafts
- Seed Metering units, box shaft and shaft connectors.
- Wheel legs and main frame assemblies
- Between discs and other sub-assembly parts (where fitted).
- Finger tine assemblies (where fitted).
- · Hydraulic Fan.
- · Row Markers.

Slippery When Wet

Slippery When Wet

Hazardous areas include:

- Footboards and footstep.
- All smooth surfaces on the frame structure.

Keep Clear

Hazardous areas include:

- Between the tractor and the Renovator AS3000/3500.
- Immediately adjacent to the Renovator AS3000/3500 side.

SAFETY - Machine Specific (Continued)

Hazard Points on the Renovator AS3000/3500 (Continued)

For guard locations on machine, refer Page 13.

Transport

The two wheels located at the sides of the machine are for the purpose of controlling sowing depth. These are also used to support the machine weight during transport (while linked to the tractor).

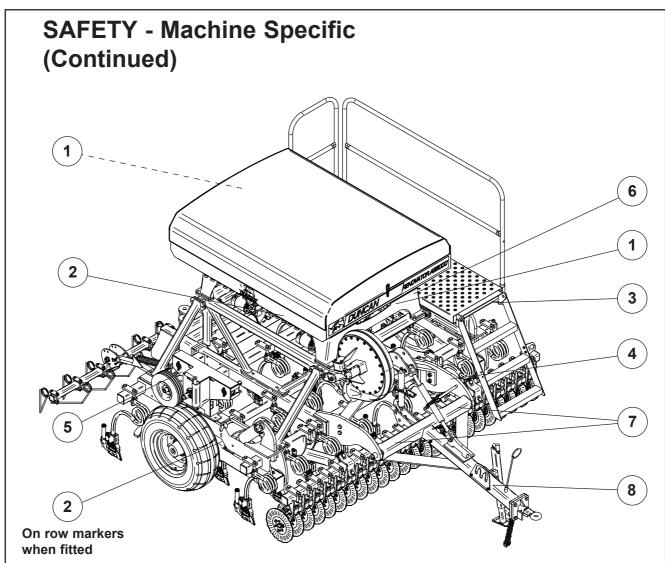

Important - Refer to safety cautions in the **Transport** section, page 14 of the manual. Ensure that all linkage pins and security clips are fitted correctly.

Maintenance

Refer Page 38 for reference to the **Maintenance and Care** section of the manual.

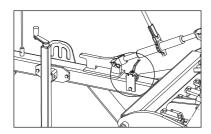

Lubrication

Refer Page 39 for reference to the **Maintenance and Care** section of the manual.

Item	Decal/Guard	Pt. No.	Qty
1	'No Ride'	43900	3
2	'Pinch Point/Moving Parts'	43901	5
3	'Slippery When Wet'	43902	2
4	'Keep Clear'	43904	2
5	Jockey Drive Swing Guard	25745	1
6	'40 km/hr'	43912	2
7	'Lift Point'	14389	2
8	'Hose Connection Colours'	72818	1

'Renovator AS3000/3500' Transport

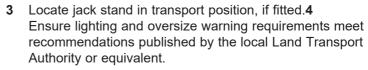

1 Raise the drill into the transport position and hold at the full extent of the rams for a few seconds to allow cylinders to rephase/equalise.

Important - To avoid machine damage due to drill lowering during transport, always close the hydraulic valve on the drawbar. Move the handle to a position at 90° to the hydraulic line. This applies to the drawbar and disc opener hydraulic valves where fitted.

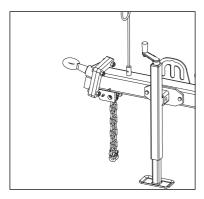

Maximum towing speed 40 km/hr.
For countries other than New Zealand other speed restrictions may apply, please refer to your local transport authority.

Ensure towing vehicle requirements are adequate for the towed vehicle e.g. mass, brakes. Refer to recommendations published by the local Land Transport Authority or equivalent.

Braking when towing can cause the load to jackknife. Use extra care when towing in adverse conditions such as mud, inclines and sharp bends.

Lower towing speeds are recommmended on farm roads/ tracks and where one wheel is on or over a road verge.

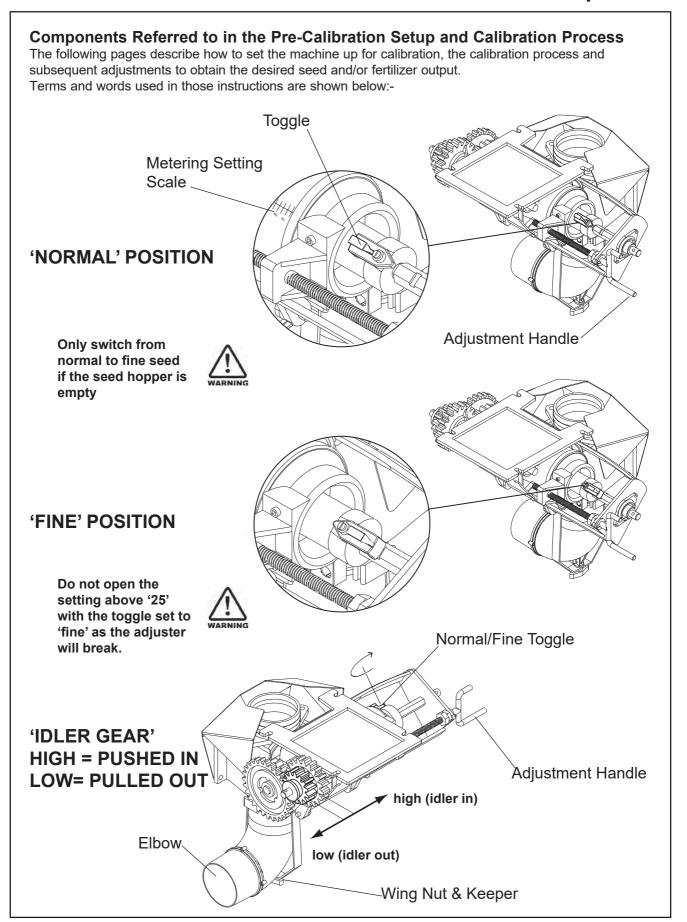

- 6 Attach safety chains to tractor. Refer Fig 3. Safety chains must be crossed over underneath the coupling and attached to the towing vehicle. The attachment points must be as close as practical to the towing coupling and one each side. The towbar on the towing vehicle must be rated for the towed mass. Do not remove or replace the safety chains provided with any other than those specified in the parts manual.

 Note: The safety chains are provided with sufficient length to cater for all towing vehicles. Safety chains must be shortened by cutting off excess length so that if the coupling fails the drawbar will not hit the ground.
- If the machine is fitted with row markers or other vertical extensions, check clearance under power lines en route.
- 8 **Important -** For greater disc opener ground clearance, adjust the ram or turnbuckle on the disc opener unit so they are at maximum height, and/or extend the drawbar ram or turnbuckle to level the machine chassis.

'Renovator AS3000/3500' Read Before Operation

'Renovator AS3000/3500' Pre-Calibration Setup

'Renovator AS3000/3500' Calibration

Seed Calibration

The calibration test should be done to confirm the settings of the required seed rate and is done with the drill stationary and level with the fan off.

The metering units must be set prior to filling with seed.

Seed Calibration Procedures

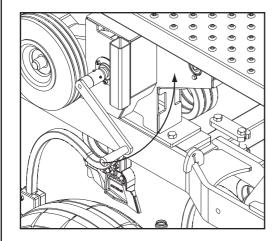

- **1** Ensure that the metering unit is free from debris. Close the trap-door.
- **2** Fill the appropriate bin. A minimum depth of 300mm is required for calibration with normal seeds.
- 3 Release the elbows from under the metering housings by unscrewing the wing nut and swinging the keeper out of the way. Move the elbow to one side.
- 4 Unhook the calibration tray from the rear of the machine, locate it on the guides and slide the tray under the bin outlets.
- 5 The bins are calibrated one-at-a-time; on the drive pedestal (outboard) end, remove the lynch pin and disconnect the unused driveshaft. Attach the end to the dummy shaft provided on the pedestal.
- 6 Place the crank handle over the hexagonal drive dog turn anti-clockwise until the seed flows consistently. To ensure complete filling of the seed unit continue turning the crank until an even flow of seed is coming out of the seeder units, then empty into the seedbox. The drill is now ready for calibration.
- **8** Refer to the table on the next page and turn the crank handle anticlockwise the number of turns for your machine.

Note The Calibration is usually done for 1/40th Hectare. For very small seed rates or when using inaccurate scales (i.e. unable to measure to the nearest gram) the calculation based on 1/10th hectare should be used. ie: In the case of a 24R 3.0m machine, turn the crank handle 122 turns.

Scales must be accurate to 2 grams as any error will be multiplied by either 10 or 40 giving inaccurate calibration results.

For $^{1}/_{40}$ Hectare (250m²) Calibration Seed Rate = Actual Seed Collected (kg) x 40

For $^{1}/_{10}$ Hectare (1000m²) Calibration Seed Rate = Actual Seed Collected (kg) x 10

'Renovator AS3000/3500' Calibration

Hand Crank Turns for Seed Rate Calibration

Machine Size	Row Spacing(mm)	Sowing Width (m)	Turns for 1/40 Hectare	Turns for 1/10 Hectare
16 Run	178	2.85	32	128
20 Run	178	3.56	25.5	102
21 Run	147.5	3.10	29.5	118
24 Run	147.5	3.54	26	103
24 Run	125	3.00	30.5	122
28 Run	125	3.50	26	104

9 Weigh the seed collected during the test in kilograms.

Caution: Scales must be accurate to 2 grams, as any error will be multiplied by either 10 or 40, giving inaccurate calibration results.

10 Calculate the seed rate by multiplying the kgs previously collected x 40 (1/40th ha method) or x 10 (1/10th ha method) depending on the requirement.

The seed rate should be correct. Large differences should be checked by recalibration. If there are still large errors, empty the seed bin, check the metering housings for wear or damage and start again from the pre-calibration setup.

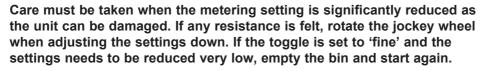

- **11** Small errors, due to seed coatings or seed sizes may be corrected by adjusting the metering unit as follows:-
 - >Check and write down the actual metering setting on the metering unit.
 - >Write down the actual seeding rate that you calculated.
 - >Write down the **required seeding rate** (the number you *expected* from the calculation).

Calculate the error and correction as follows:-

$$error = \frac{difference\ between\ actual\ and\ required\ seeding\ rate}{required\ seeding\ rate}$$

 $correction = error \ x \ actual \ seeding \ rate$

- 12 If the actual seeding rate that you calculated is smaller than the required seeding rate then increase the metering setting by the correction amount.
- **13** Conversely, **reduce** the **metering setting** by the **correction** amount if the observed or **actual seeding rate** is **more than** the **required seeding rate**.

- **14** Recalibrate from step 6.
- 15 Where a coated seed is used it is advisable to check the calibration after 1 hectare as dressings can tend to create a coating on the seed metering wheels thus changing the the flowing properties of the seed which in turn alters the seed rate.

'Renovator AS3000/3500' Calibration

Wheel Slip Deviations

It is always possible with rubber tyred drills in extreme ground conditions to get wheel slip. Not normally a problem with cleated type tyres in good condition, but more so in the arable situation with the less agressive tread patterns. The result: large differences between the calibration test and the actual sowing rate, obviously less seed deposited than required.

To check number of crank turns for calibration

Should you require to check this in a practical way proceed as follows:

For an area of 250m² (1/40 Hectare), the travel distance for your machine is shown below:-

Machine Size	Row Spacing (mm)	Travel Distance for 1/40Ha (metres)
16 Run	178	87.8
20 Run	178	70.2
21 Run	147.5	80.7
24 Run	147.5	70.6
24 Run	125	83.3
28 Run	125	71.4

Place the crank handle over the hexagonal drive dog on the gearbox.

Move the machine forward over the measured distance, counting the number of turns of the crank handle as you go.

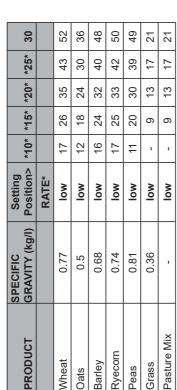

Using this number of crank turns repeat the calibration.

^{**}Setting may only be reduced by a large amount if unit is turning or bin and metering device clear of product else damage will occur. Do not open the setting above '25' with the toggle set to 'fine' as the adjuster will break.

Box contents		Buttoufly Docition (offeets year boy)	Fan Snood/rnm*		
FRONT	REAR	Butterfly Position (affects rear box)	ran Speed/rpm		
seed (Normal)	seed (Normal)	open - 5	3000		
seed (Normal)	seed (Fine)	closed - 1	3000		
Fertilizer	seed (Normal)	closed -2	3000 to 3500		
Fertilizer	seed (Fine)	closed - 1	3000 to 3500		

* MAXIMUM PERMISSABLE FAN SPEED 4000 RPM

'Renovator AS3000/3500' Airflow & Fan Speed

Airflow and Fan Settings

1. Hydraulic Fan -connect the hoses in the following order:

Second -connect Motor Return 3/4" hose (3/4" BSP Female QR) to tractor high flow low pressure return port. Hose marked with medium length RED wrap.

Finally - connect High Pressure Motor Feed 1/2" hose (1/2" BSP Male QR) to tractor remote. Hose marked with long RED wrap.

Disconnect in the reverse order to prevent motor seal damage.

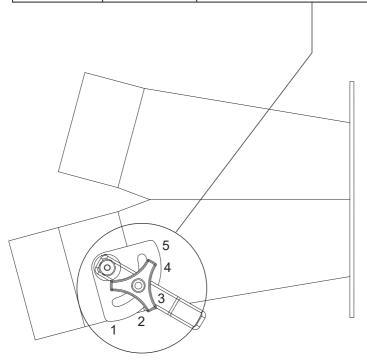

*The tractor hydraulic reservoir or free drain connection must have zero backpressure.

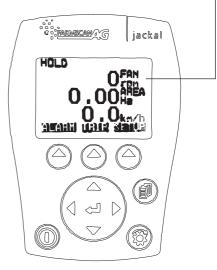

2. A higher fan speed is usually required to correctly deliver high rate or heavier product such as fertilizer from the front box. The airflow to the rear box is reduced by setting the butterfly valve to the approriate position as shown in the table. If this is not done the seed delivered to the disc units from the rear box may well bounce out of the seed slot.

The following table shows box fill combinations, butterfly position and recommended fan speeds for normal/fine seeds and fertilizer:-

Box contents		Putterfly Decition (offects rear boy)	Fan Spood/rpm*		
FRONT	REAR	Butterfly Position (affects rear box)	ran Speed/rpm*		
seed (Normal)	seed (Normal)	open - 5	3000		
seed (Normal)	seed (Fine)	closed - 1	3000		
Fertilizer	seed (Normal)	closed -2	3000 to 3500		
Fertilizer	seed (Fine)	closed - 1	3000 to 3500		

* MAXIMUM — PERMISSABLE FAN SPEED 4000 RPM

The Fan Speed shown on the Farmscan Jackal is for illustrative purposes only. Refer to the table for the correct setting.

'Renovator AS3000/3500' Operation

Operation

General Operation Guidelines

1 Hydraulic Fan -connect the hoses in the following order:

First - connect Zero pressure Case Drain 3/8" hose (1/2" BSP Female QR) to hydraulic reservoir * Hose marked with short RED wrap.

Second -connect Motor Return 3/4" hose (3/4" BSP Female QR) to tractor high flow low pressure return port. Hose marked with medium length RED wrap.

Finally - connect High Pressure Motor feed 1/2" hose (1/2" BSP Male QR) to tractor remote. Hose marked with long RED wrap.

Disconnect in the reverse order to prevent motor seal damage.

*The tractor hydraulic reservoir or free drain connection must have zero backpressure.

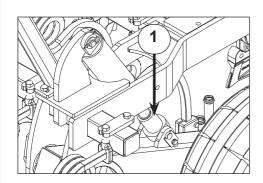

- **2** Use a sufficiently powerful tractor which is heavy enough to tow the drill safely.
- 3 Operate the drill at a speed of 6-12 km/hr (4-8 mph). In stony and uneven ground conditions a lower speed is more appropriate
- 4 Check that the drill is level during calibration and while seeding.
- **5** Check tyre pressure before seeding. Refer page 5.
- 6 Double check seed rates before seeding.
- 7 Raise the drill out of the ground when making any turns.
- 8 Raise the drill out of the ground before backing up.
- **9** After prolonged storage, check to see that all drive mechanisms and hydraulic equipment are functioning correctly. Check that the seed tubes are not perished or blocked.

Sowing Speed

Typical travel speeds when sowing range from 6-12 km/hr in good conditions. In stoney and uneven ground conditions a lower speed is recommended to minimise rapid part deterioration. Sowing too fast can result in:

- 1 Poor contour following and uneven sowing depth.
- 2 Impact damage to:
 - a Ground engaging components.
 - **b** Bearings, housings & axles.
 - c Fasteners & structural components.
- **3** More extreme conditions will result in greater vibration and uneven seed flow at low seeding rates.

'Renovator AS3000/3500' General Operation

Sowing Depth Control

The sowing depth is dependent on:

- 1 The wheel height in relation to the chassis
- 2 Tyre pressure
- 3 Ground condition i.e. hard or soft

The wheel height in relation to the chassis is controlled using the threaded depth adjustment collars on the wheel leg rams.

Level Drill

Use the drawbar turnbuckle or ram to tilt the drill so it is sitting level. An adjustment may be required after a short period of use because the paint wears off the discs and the discs sharpen which in turn improves the penetration abilities. Ensure that the front and rear rows are at an even depth.

Transport Position

When in the transport position the hydraulic cylinders are fully extended. In this position the cylinders fully equalise by allowing oil to bypass the master cylinder piston. It is recommended to raise the drill into the transport position when turning at headlands or regularly to counteract the effects of oil leakage past the piston and ensure cylinder rods are equally extended and minimise variations in sowing depth.

'Renovator AS3000/3500' Jackal Areameter

Farmscan Jackal v3.5 Settings Setup

Refer to the manual supplied with your Farmscan Jackal kit for information and operation.

Farmscan Jackal v3.5 Factory Setup for Enviro DD30 Air

Refer to the Farmscan Jackal v3.5 manual.

Input 1 -Three wire proximity sensor for 'Area/Speed Wheel' measurement taken from shaft on drive pedestal.

Refer to the Farmscan manual if you want to make additional sensor connections.

It is advisable, as with all things electronic, to have a backup of your totals. We suggest you record these on a daily basis in a notebook or diary.

Connect to Fan RPM

Renovator AS3000/3500	Calibration Notes

Maintenance & Care

General Safety and Accident Prevention Advice

- 1 Make sure that if the tractor remains attached to the drill that the ignition key is removed.
- 2 During maintenance the drill should be supported in such a manner that if hydraulic failure was to occur the machine would still be adequately supported.
- 3 Wear gloves when handling components with cutting edges such as worn discs etc.
- 4 Disconnect the electrical supply from the tractor before doing any electrical maintenance.
- 5 Refer to safety sections for more safety information.

General Cautionary Maintenance Advice

- 1 **Electric Welding** With the electronic equipment in modern tractors it is advisable to completely disconnect the implement from the tractor, or at the very least disconnect the alternator before attempting any welding.
- 2 Hydraulics Ensure hydraulic couplings (male & female) are clean before connecting. Dirty couplings will result in hydraulic oil contamination and hydraulic cylinder seal/ poppet valve damage and bore scores. This in turn will result in oil leakage past the piston seals.
 - No filter is fitted to the hydraulic system. If hydraulic fittings and oil supply are not going to be kept clean it is recommended that a filter be fitted to prevent hydraulic cylinder damage.
- Water Blasting Water blasting, steam cleaning or other pressurised cleaning processes can force dirt etc. into undesirable places that may cause damage or rapid part wear to items such as bearings, seals, chains, bushes etc. Caution must be exercised.

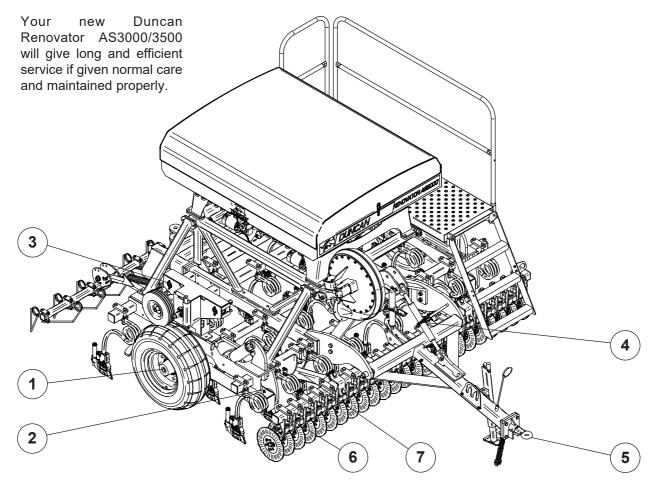

Maintenance & Care - Lubrication Instructions

Precautions with Grease

Greases should not be mixed as the structure may be weakened by the mixes of different types of thickener, which may cause softening and loss of grease from the bearings by running out.

Lubrication Chart

Item	Components	Lubricant	Frequency
1	Wheel Bearings	Castrol LMX Grease	Annually
2	Wheel Leg Pivots	Castrol LMX Grease	Weekly
3	Drive Chains	Suitable Roller Chain Lubricant	See Maintenance Schedule
4	Turnbuckle	Castrol LMX Grease	Monthly
5	Coupling	Castrol LMX Grease	Weekly
6	Disc Arm Castings	Castrol LMX Grease	Daily
7	Disc Opener Fr. Pivots	Castrol LMX Grease	Monthly

^{*} The lubrication frequencies are only a guide. Actual frequency will be dependent on extent of use and ground conditions.

Maintenance & Care - Lubrication Instructions

Components	Daily (or after 20Ha)	Weekly (or after 75Ha)	Pre Season (or 500 Ha)

Coupling & Safety Chains		•	•
Roller Chains		•	•
Hydraulics (Oil Leaks)		•	•
Tyre Pressures		•	•
Bolted Connections			•

Maintenance Schedule

(Refer also to Summary Chart, above)

1. Bolted Connections

All bolted connections of the machine should be checked after the first 3 to 5 hours of operation and retightened if necessary and thereafter at regular intervals. It is suggested that this is done every 500 hectares or annually, whichever occurs first.

2. Drive Chains

All drive chains should first be checked after every 20 hours of operation and thereafter weekly or after 75Ha of operation as follows:-

The metering units of the seed drill are driven via driveshafts and roller chains from the drive wheel. Cleaning of the roller chains is recommended after long periods of operation. Remove the chain, wash in kerosene and then dip them in heated grease or oil or spray them with a suitable commercial roller chain lubricant. Do not heat the black plastic chain tensioners; just wash in kerosene and refit. The lubricant on the chain will transfer to the tensioner in use.

4. Wheel Arm Pivots

Wheel arm pivots must be greased regularly (weekly or after every 75Ha) to provide lubrication and flush out any dirt. (1).

5. Depth Adjustment Collar

Grease the depth adjustment collar (2) regularly to ensure it does not seize up. Also check for dirt buildup around the ram shaft seals to ensure seal damage does not occur. Refer Fig 26

Maintenance Schedule (continued)

6. Tyre Pressure

The recommended tyre pressure is listed on Page 5. Weekly checks are recommended.

7. Disc Openers

Front coulter bearings are sealed and do not require lubrication. Check discs for any lateral movement (wobble) on a regular basis. Replace bearings if there any noticable wobble.

There is one grease nipple on each disc opener frame pivot and disc assembly casting. Frame pivots should be greased monthly while disc castings should be greased daily to provide lubrication and to flush out any dirt.

8. Framework

The framework structure should be inspected annually for defects, i.e., cracks in members or welded connections. The framework should be cleaned prior to the inspection.

9. Metering Units

Ensure that the metering units are clean and that the rubber sealing lip is not damaged. The sealing lip is located along the base of the trap door hinge. A damaged sealing lip can cause seed delivery problems.

10. Fan Hydraulic Motor

Hydraulic Fan -connect the hoses in the following order:

First - connect Zero pressure Case Drain 3/8" hose (1/2" BSP Female QR) to hydraulic reservoir * Hose marked with short RED wrap.

Second -connect Motor Return 3/4" hose (3/4" BSP Female QR) to tractor high flow low pressure return port. Hose marked with medium length RED wrap.

Finally - connect High Pressure Motor Feed 1/2" hose (1/2" BSP Male QR) to tractor remote. Hose marked with long RED wrap.

Disconnect in the reverse order to prevent motor seal damage.

*The tractor hydraulic reservoir or free drain connection must have zero backpressure.

Maintenance & Care - continued **Preparing the Machine for Storage.** Locate on a dry level surface. The machine should be stored wherever possible so the rams are not supporting any weight. The drive chains should be lubricated with suitable roller chain lubricant before prolonged periods of storage. It is recommended that maintenance be carried out at the end of the season, giving sufficient time to obtain spare parts and/ or carry out repairs if required. The seed and fertilizer bins must be completely emptied and cleaned Leave the metering unit trap doors open. Fit the cover to the bin.

'Renovator AS3000/3500' Troubleshooting

Problem	Possible Cause	Action	Refer to Page
	Jockey wheel under inflated	Check pressure	5
	Are the Jackal meter settings correct?	Check settings	25
Over Sowing	Has the setup/calibration procedure been followed correctly?	Check setup and recalibrate	20
eve. ceg	Gearwheel position incorrect	Check setup for seed type	20
	Crank handle turned too quickly when calibrating	Only 1.5 seconds per revolution	21
	Has the setup/calibration procedure been followed correctly?	Check setup and recalibrate	20
	Gearwheel position incorrect	Check setup for seed type	20
Under Sowing	Are the calibration scales in kg (not lbs)?	Check scales	-
	Sowing at shallow depths. Is there sufficient pressure on the jockey wheel?	Check and adjust spring pressure	-
	Metering unit is clogged	Clean metering unit	-
Cracking noises coming from the metering unit	Very large seed	Remove roll pins from agitator shaft	
Drill sowing deeper on one	Hydraulic lift rams have not rephased properly	Rephase rams	36
side/leaking down on one side	Dirt in the poppet valve of the ram	Clean/replace valve	
Tines are moving	Too much turning with drill in the ground	Keep turning to minimum	-
Drill not	Operating the drill in the float position	Do not operate in float	-
penetrating into ground/drill riding out of ground	Disc openers are keeping the drill from penetrating into the ground	Lift discs out of the ground	-

'Renovator AS3000/3500' Phasing Cylinders

Commisioning Phasing Cylinders

1. General

- (a) The cylinders will re-phase in both directions. Each piston is fitted with 2 poppet valves which open at the end of the stroke to allow oil to bypass the piston. The bypass of oil at the end of the stroke allows for initial bleeding of the system and re-phasing in operation.
- (b) The valve in the piston is a precision device, **CLEANLINESS IS OF THE UTMOST IMPORTANCE.** Contamination in the oil will accelerate deterioration of the valve seat. Cylinders will creep once the integrity of the seating is lost.

2. Bleeding the System

(a) Initial bleeding after connection to the tractor

Purge all air from the system by fully stroking rams in both directions. Allow the oil to flow through the cylinders with the tractor at an idle for a minimum of 2 minutes at each end of the stroke.

(b) Re-phasing after initial bleeding

After initial bleeding the cylinders will only require occasional re-phasing during operation. This is done by extending the rams for about 30 seconds or until all cylinders have reached the end of their stroke.

3. Fault Finding

1. Cylinders creeping during operation

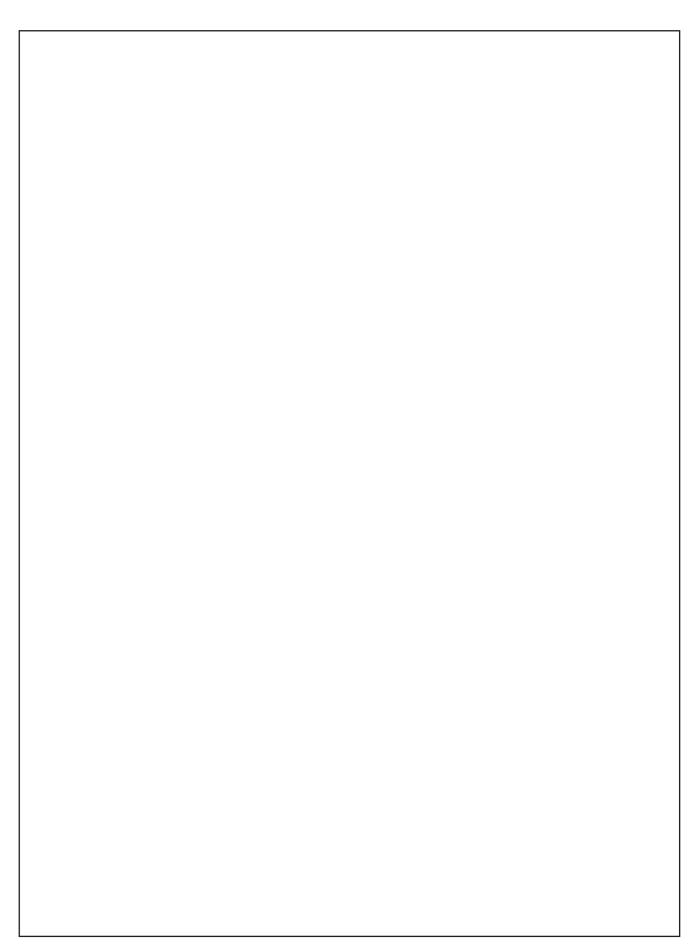

There are two primary causes of this:

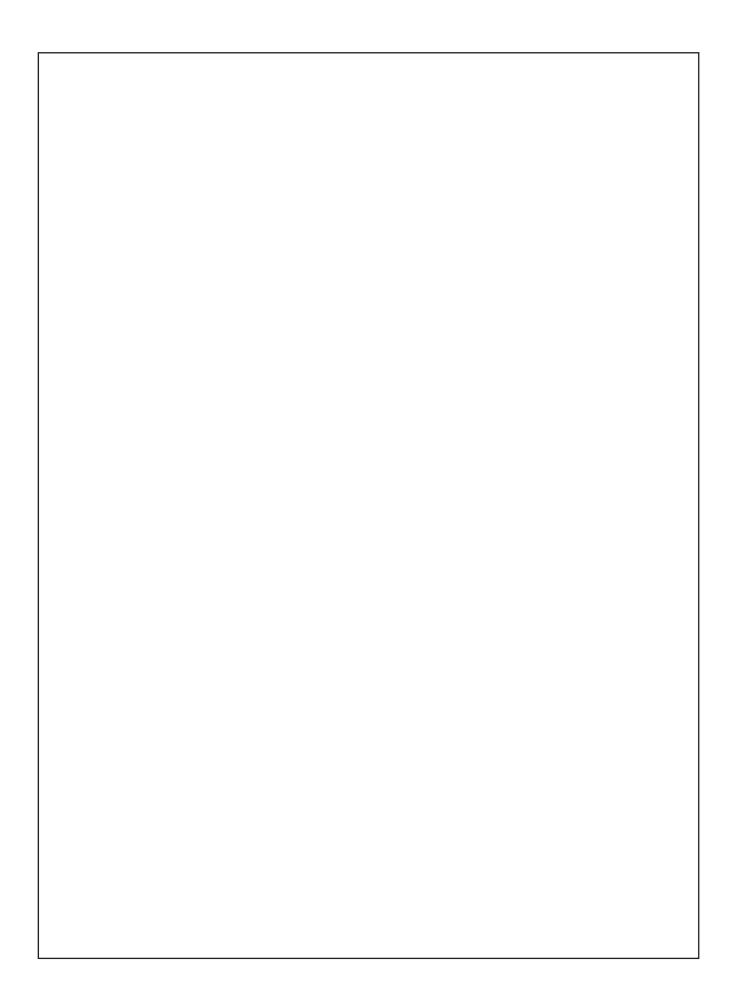

- (i) Air in the hydraulic system
- (ii) By passing of the poppet valve.
- (a) Check that there is no air in the system. Raise and lower the machine. All cylinders should move instantaneously, any lag indicates that there is air in the system. Other signs of air in the system are hoses vibrating/squealing or the control handle shuddering. Re-bleed the system if necessary.
- (b) If there is no sign of air in the system and the cylinders still creep, raise the machine off the depth stop and measure the movement of each cylinder rod.
- (c) If both cylinders move at the same rate it is likely to be the control valve/lock out valve that is leaking.
- (d) If the slave continues moving after the master cylinder has hit the depth stop it is likely to be the piston in the master cylinder that is bypassing.
- (e) If the slave cylinder extends while the master cylinder retracts it is likely to the the piston in the master cylinder that is bypassing.
- (f) If the master cylinder does not move but the slave does it is likely to be the piston in the slave cylinder that is bypassing.
- (g) If the piston is bypassing it is likely to be contamination in the phasing valve. The cylinder will have to be dismantled, cleaned and fitted with a new poppet valve.

'Renovator AS3000/3500' Phasing Cylinders

Commisioning Phasing Cylinders (continued)
3. Fault Finding (continued)
2. Cylinders moving at different rates
(a) Check that there is no air in the system. Raise and lower the machine; all cylinders should move at the same time, any lag indicates that there is air in the system. Re-bleed the system if necessary.
(b) Ensure that the cylinders have been connected correctly. The cylinders should be connected in series so that the bore sizes go down in 1/4" increments. The Rod end port of the master cylinder (3.5" bore) is connected to the piston end port of the slave cylinder (3.25" bore).

'Renovator AS3000/3500' Tine Harrow (Optional)

'Renovator AS3000/3500' Tine Harrow (Optional)

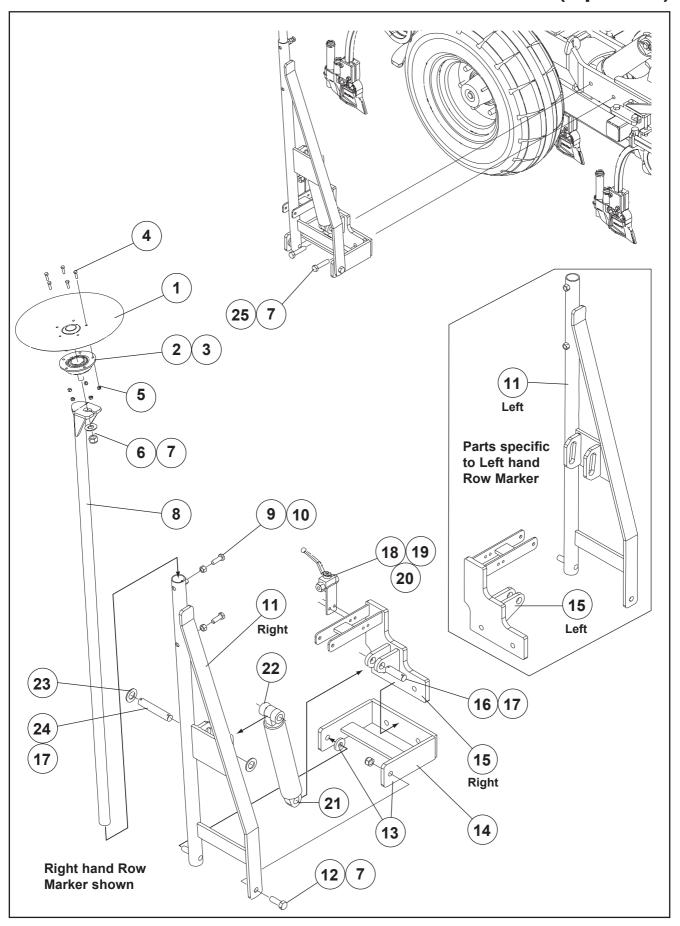

ITEM	PART No.	DESCRIPTION	Q	QTY	
			24R	28R	
1	RFT30	Tine Harrow 3.0m	1		
1	RFT35	Tine Harrow 3.5m		1	
2	60426	Tine Harrow Strut W/Assy		2	
3	60428	Strut Bolt Plate		2	
4	60430	Swinging Arm W/Assy		2	
5	60435	Guidingbar W/assy		2	
6	60437	Levelling Harrow Spring		2	
7	60438	Guiding bar Bush		2	
8	60439	Guiding Spacer		4	
9	43118	Grease Nipple Straight		2	
10	45006	M10 X 45 Gr 8.8 bolt Z/P		4	
11	45138	M10 Nyloc Nut	3	36	
12	45050	M16 X 120 Gr 8.8 bolt Z/P		8	
13	45140	M16 Nyloc Nut		8	
14	45073	M20 X 130 Gr 8.8 bolt Z/P		6	
15	45161	M20 HD flat washer Z/P		4	
16	45141	M20 Nyloc Nut		6	
17	60423	Levelling Harrow Bar W/Assy 3.0m	2		
17	60424	Levelling Harrow Bar W/Assy 3.5m		2	
18	60440	Swinging Bracket Spacer		4	
19	60441	Levelling Harrow Pivot Pin W/Assy		2	
20	43675	1/4" x 1 1/2" Lynch Pin		2	
21	60255	Levelling Harrow Tine -LH	1	12	
22	60256	Levelling Harrow Tine -RH	1	12	
23	60422P#	Double Retaining Plate Profile	2	24	
24	45016	M10 X 100 Gr8.8 Bolt Z/P	2	24	
25	43120	Grease Nipple 90°		2	
26	60421	Tine Harrow Bracket		2	
27	45013	M10 x 80 Gr 8.8 bolt Z/P		8	
28	60420	Harrow Bar Clamp Plate		2	

'Renovator AS3000/3500' Uni-Roller (Optional)

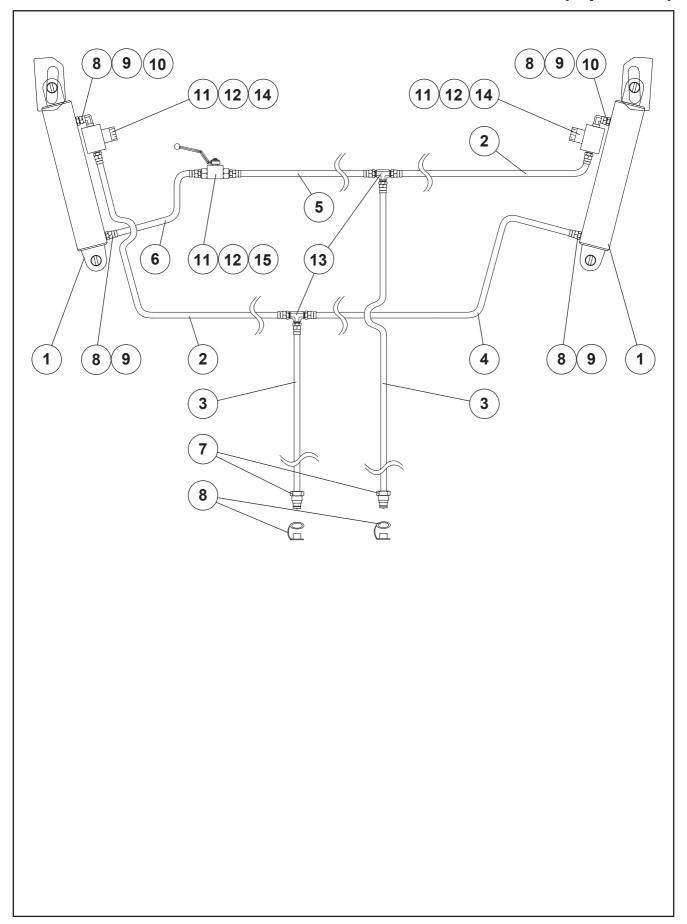

'Renovator AS3000/3500' Uni-Roller (Optional)

ITEM	PART No.	DESCRIPTION	Q ⁻	QTY	
			24R	28R	
1	RTR30	Uni-Roller Complete 3.0m	1		
1	RTR35	Uni-Roller Complete 3.5m		1	
2	60475	Roller Frame W/Assy 3.0m	1		
2	60476	Roller Frame W/Assy 3.5m			
3	60490	Drawbar Assembly Complete	,	1	
4	60496	Link	,	1	
5	60482	Roller Tube W/Assy	1		
5	60483	Roller Tube W/Assy		1	
6	43589	Tyre 185/70 R13	19	22	
7	60494	End Retaining Plate	2	2	
8	43588	Bearing Unit	2	2	
9	60495	Roller Axle Retainer	2	2	
10	45041	M16 x 55 Class 8.8 Z/P Bolt	1	10	
11	45140	M16 Nyloc Nut	1	16	
12	43271	Drain plug	2	2	
13	45064	M20 x 65 Class 8.8 Z/P Bolt	2	2	
14	45141	M20 Nyloc Nut	2	2	

ITEM	PART No.	DESCRIPTION	QTY
KIT	61725K	Row Marker Kit:-	
1	10192	Disc	1
2	23535	Bearing Stud	1
3	14443	Bearing Housing	1
4	44952s	M6 x 20 Grade 8.8 Z/P S/Screw	6
5	45136	M6 Nyloc Nut	6
6	45160	M16 H/D Flat Washer Z/P	1
7	45140	M16 Nyloc Nut	2
8	23542	Disc Arm Assembly	1
9	45131	M12 Grade 8.8 Hex Nut Z/P	2
10	45020s	M12 x 35 Grade 8.8 Z/P S/Screw	2
11	61735	LH Frame W/Assembly	1
11	61736	RH Frame W/Assembly	1
12	45039	M16 x 45 Grade 8.8 Z/P Bolt	1
13	22416	Spacer	4
14	61726	Hinge Frame W/Assembly	2
15	61730	L/H Ram Mount W/Assembly	1
15	61731	R/H Ram Mount W/Assembly	1
16	23589	Ram Pivot Pin	2
17	45272	R Clip (S12) OR (AG7)	8
18	61749	Ball Valve Mount W/Assy	1
19	44962	M8 x 30 Grade 8.8 Z/P Bolt	2
20	45137	M8 Nyloc Nut	2
21	61751	D/A Ram 2" x 1" x 8" Compact S	2
22	61740	Frame Ram Spacer	4
23	45163	M24 H/D Flat Washer Z/P	4
24	61742	Ram Pivot Pin 126 Long	2
25	45044	M16 x 70 Grade 8.8 Z/P Bolt	4

Hydraulic hoses and component detail are shown on the next page.

ITEM	PART No.	DESCRIPTION	QTY
KIT	61743K	Hydraulic hose & Fittings Kit:-	
1	61751	D/A RAM 2" x 1" x 8" Compact S (3/8" Ports)	2
2	61745	Hose 1.65m (Tee to Outer Cylinder via Needle Valve)	2
3	61744	Hose 3.80m (Tractor to Tee)	2
4	61746	Hose 1.60m (Tee to Inner Cylinder)	1
5	61747	Hose 1.15m (Tee to Ball Valve)	1
6	61748	Hose 0.70m (Ball Valve to Inner Cylinder)	1
7	43147	1/2" BSP Male Q.R. Coupling	2
8	44103	1/4" BSPM x 3/8" BSPPM Nipple	4
9	43391	3/8" Dowty Washer/Seal	4
10	44108	1/4" BSPPM x 1/4" BSPPF Swiv 90°	2
11	44104	1/4" BSPPM MM Nipple	4
12	44105	1/4" Dowty Washer/Seal	4
13	44106	1/4" BSP Tee MMM	2
14	44107	1/4" BSP Needle Valve	2
15	61749	1/4" Ball Valve with bracket mount	1
16	44962	M8 x 30 Grade 8.8 Z/P Bolt	2
17	45137	M8 Nyloc Nut	2
18	43617	1/2" Female Carrier Dust Plug	2
